ABSTRACT

This document presents guidelines for the development of Computer Aided Design and Drafting (CADD) drawings for the design of the California High-Speed Train Project (CHSTP). These guidelines are intended to provide a means to maintain consistency in the presentation of contract drawings and to organize the electronic database so that it can be easily accessed across the project disciplines and geographic regions and utilized throughout the duration of the project.

The intended audience for this document is the various regional design teams and design builders preparation CADD drawings for the CHSTP. Adherence to the CADD Guidelines will produce a consistent set of drawings that are organized and contain sufficient information to clearly convey the design intent. The CADD Guidelines shall be followed by all CADD users to assure a unified set of documents is presented to the client.

The document includes guidance on the drawing standards, software platforms, file management and file types.

Guidelines for the development and maintenance of electronic files and information are also included in this document. Concurrent with the release of this guidelines document, drawing files containing the CHSTP drawing border will be made available for use by designers in preparing project drawings.

1.0 INTRODUCTION

1.1 PURPOSE OF GUIDELINES DOCUMENT

The purpose of this guidelines document is to establish uniform policies and procedures for the Design, Drafting, and Management of electronic files and information for the California High-Speed Train Project (CHSTP) drawing delivery process.

The guidelines document presents the methods and standards to be used to develop CADD drawings for the CHSTP and are intended to provide a means to maintain consistency and uniformity in the presentation of contract drawings and to organize the electronic database in a manner that can be easily accessed and utilized across the project disciplines and geographic regions and utilized throughout the duration of the project.

The guidelines are to be adhered to throughout the project development process in order to provide a consistent set of organized drawings that contain sufficient information to clearly convey the design intent.

Special situations that require a deviation from the CADD guidelines must be presented to the CHSTP CADD manager for suggestions and solutions via the CHSTP CADD Standards request form discussed in Appendix A of this manual.

1.2 MINIMUM SYSTEM REQUIREMENTS

1.2.1 Sheet Production

The CHSTP standard CADD production platform shall be Bentley's MicroStation V8i (Select Series 1 or higher). Information regarding the system requirements for this production platform can be found on the Bentley website, link shown below:

http://ftp2.bentley.com/dist/collateral/docs/microstation/microstation_product_data_sheet.pdf

1.2.2 Design Files

The CHSTP standard vertical design platform shall be Bentley's Power InRoads and Power Rail Track. Information regarding the system requirements for this design platform can be found on the Bentley website, link shown below:

Power Rail Track: <http://www.bentley.com/en-US/Products/Power+Rail+Track/>

Power InRoads: <http://www.bentley.com/en-US/Products/Power+inroads>

1.3 GENERAL INFORMATION

1.3.1 ProjectSolve Document Management System

The CHSTP management team has established ProjectSolve as its primary document management system. Its purpose includes centralizing and maintaining all necessary documents between the management and design teams. Links to folders and files managed within ProjectSolve can be found throughout this document.

A formal request is required for any/all parties that need access to the CHSTP ProjectSolve site. The workflow shown has been established to streamline the process of granting new users permission to the site.

1.3.2 ProjectWise Document Management System

The CHSTP management team has also established ProjectWise as its primary electronic (DGN file) design drawing management system for Preliminary Design for Procurement and procurement drawing submittals.

1.3.3 Definition of Terms

The following technical terms are used in this document and have specific connotations with regard to the CHSTP:

As-Built Drawings	Construction Drawings modified to reflect design changes and actual conditions of construction, conformed from field and design changes directly from the Ready for Construction (RFC) drawings
Contract drawings	Drawings files that are specific to the project and contract. Contract drawings include preliminary design drawings and construction drawings
Construction Drawings	Drawings furnished by the contractor representing the post preliminary design project delivery, from final design through completion of construction. Construction drawings include Final Design drawings, Ready for Construction (RFC) drawings as As-Built drawings
Contract Number	The number assigned to an individual design or construction project
Directive Drawings	Directive Drawings provide mandatory design criteria in a graphical format that the Contractor shall follow and apply to ensure consistency during design for system-wide elements and features
Drawing Number	Number found in the titleblock assigned to an preliminary, construction, standard or directive drawings
Preliminary Engineering for Procurement	Preliminary engineering that demonstrate technical feasibility and constructability for procurement
Ready for Construction Drawings (RFC)	Construction drawings designed to 100% that are ready and used during construction. They are the basis for the as-built drawings

Regional Consultant	The consultant selected by the Authority to be responsible for the overall preliminary design of the project
Resolution	The 'worst-case' accuracy for the design environment that occurs at the very outer limits of the working area/plane/volume
Seed File	A CADD template file that contains settings such as the project global origin and working units and does not contain design elements
Standard Drawings	Standard project elements for general use in the construction of the California High-Speed Train system, as determined applicable by the Contractor
Title Block	The title block in these guidelines is defined as the lower portion of the drawing containing information such as drawing title, signature blocks, project logos, et al

1.3.4 Acronyms

CADD	Computer Aided Design and Drafting
CC	Carbon Copy
CCS	California Coordinate System
Caltrans	California Department of Transportation
CHSTP	California High-Speed Train Project
DGN	MicroStation V8i cad file
EMT	Engineering Management Team
NIST	National Institute of Standards and Technology
PDF	Portable Document Format
PMT	Program Management Team

1.3.5 Units

The California High-Speed Train Project is based on U.S. Customary Units and defined by the National Institute of Standards and Technology (NIST). U.S. Customary Units are officially used in the United States, and are also known in the US as "English" or "Imperial" units. In order to avoid confusion, all formal references to units of measure should be made in terms of U.S. Customary Units. See the CHSTP Plans Preparation Manual for additional information regarding units.

1.3.6 Ha Copy Deliverables

Ha Copy files shall be available for transmittal in the following format:

- Black and white on recycled white copy paper for half size copies. Full size sets printed on 24lb bond plotter paper
- Each paper copy submittal shall be accompanied by a PDF submittal for each of the plan set packages.

Plot size is dependent on the submittal and shall be prepared as shown in the below chart:

Drawing submittal	PDF Half (11x17)	PDF Full (22x34)
15% Record Set	x	
Preliminary Design for Procurement	x	
Design Baseline Report Drawings	x	
Construction Design Drawings	x	x
Ready for Construction (RFC)	x	x
As-Built	x	x

1.3.7 Electronic “Soft” Copy Deliverables

Electronic CADD files deliverables shall be available for transmittal with the following requirements:

- MicroStation V8i design files (DGN) format
- One model per DGN file

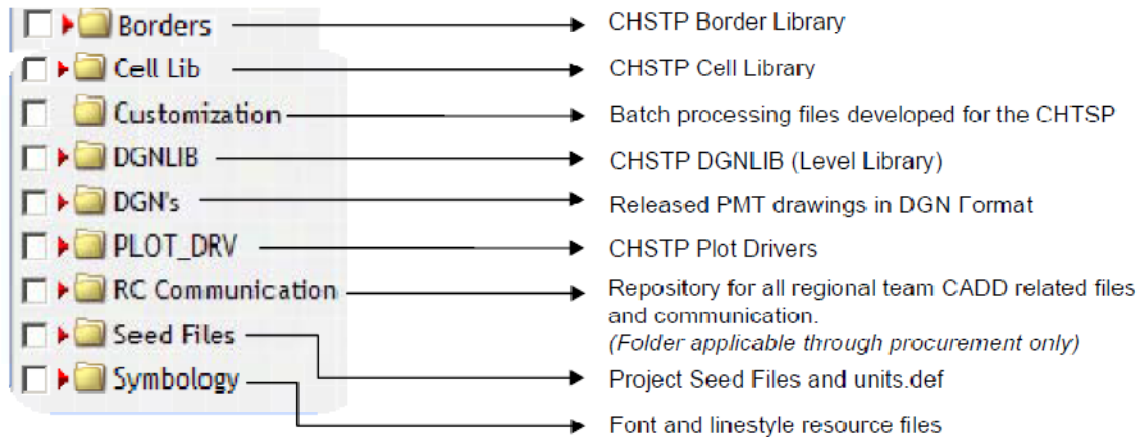

DGN requirements are dependent on the submittal and shall be prepared as shown in the below chart:

Drawing submittal	DGNs merged	DGNs unmerged	GIS (programmatic assets)
15% Record Set		x	x
Preliminary Design for Procurement		x	x
Design Baseline Report Drawings		x	x
Construction Design Drawings		x	x
Ready for Construction (RFC)	x	x	x
As-Built	x		x

1.3.8 CADD Resource Library

The CHSTP PMT utilizes ProjectSolve as the central repository for all CADD resources files. Files residing in the CADD resources shall be, but not limited to, the list shown below:

Link to CADD Resources Folder:

https://ww3.projectsolve2.com/eRoom/SFOF7/Engineering/0_48e9b

1.3.9 CHSTP CADD Inbox

The PMT has established a dedicated ProjectSolve Inbox to house all CADD related correspondence. It is required, for all CADD related correspondence transmitted to the PMT, to CC the CHSTP CADD Inbox.

Email Address:

CHSTPCAD@projectsolvemail.com

1.3.10 CHSTP CADD Contacts

It is vital throughout the duration of the CHSTP Project to maintain a primary CADD Contact list. To date, the list includes names, emails and phone numbers for the EMT CADD Manager, EMT CADD Lead and all design consultants CADD leads. It shall be maintained throughout the lifecycle of the project, from preliminary design thru construction. Any revisions to the CADD contact list must be transmitted to the management team to ensure the contact list remains current.

Link to CHSTP CADD Contacts List:

https://WW3.projectsolve2.com/eRoom/SFOF7/Engineering/0_c3556

1.3.11 CHSTP CADD Standards Request Form

The CHSTP CADD Standard Request form has been established to maintain and certify any variances in the CADD Standards throughout the life cycle of the project.

A copy of the CHSTP CADD Standards Request can be found in Appendix A of this manual. Users must use the link below to the official PDF Form for all CADD standards variance request. As stated above in Section 1.3.10, all email requests shall CC the CHSTP CADD Inbox in addition to emailing the CADD manager:

Link to CHSTP CADD Standards Request Form:

https://WW3.projectsolve2.com/eRoom/SFOF7/Engineering/0_c3557

2.0 CADD FILE OVERVIEW

2.1 CADD FILES

The Design efforts will result in the creation of numerous CADD files, including master files, sheet files, nested files and working files.

2.2 MASTER FILES

Master files are intended as overlays to other CADD files and are used to share design data between disciplines and designers. Typically master files include survey, mapping topography, utilities, and track alignment.

See Section 3.1.1 for Master File Naming Convention

2.3 SHEET FILES

Sheet files will contain only sheet dependent information such as title block information, north arrow, bar scales, dimensions, and notes. Master files are attached to the sheet files and clipped to display design information particular to that sheet. Information viewed in the sheet can be manipulated with level controls. Details, sections, and elevations will be drawn to a scale as required to convey the necessary design information and design intent. Sheet files incorporate necessary design information to create a design discipline drawing for inclusion in a specific deliverable plan set. Plotting for drawings shall be done from the sheet files. Saved view titled "PLOT" shall be created for each sheet view.

See Section 3.4.1 for Sheet File Naming Convention.

See Plans Preparation Manual for additional information regarding sheet file generation

2.4 NESTING FILES

Nesting files are master files that are attached to the cut sheets using the "live nesting" feature. A nesting file is a compilation of master files that are displayed with the settings and level structure that are to be displayed in the cut sheet. When the nesting file is attached to the cut sheet with "live nesting" turned on, the sheet will display all of the levels and settings for all master files attached to the nesting file.

In order for level display to work properly, MicroStation must have the variable MS_NEWLEVELDISPLAY set to 1.

See Section 3.5.1 for Nesting File Naming Convention.

2.5 WORKING FILES

Working files may be used by designers to develop various options for alignment, structures, or other facilities and may become either a master file or sheet file. Working files can contain information to be used for design, calculation support, or "DRAFT" purposes only. Working files are not for inclusion in a specific deliverable plan set, nor are they to be referenced from any plan sheet file.

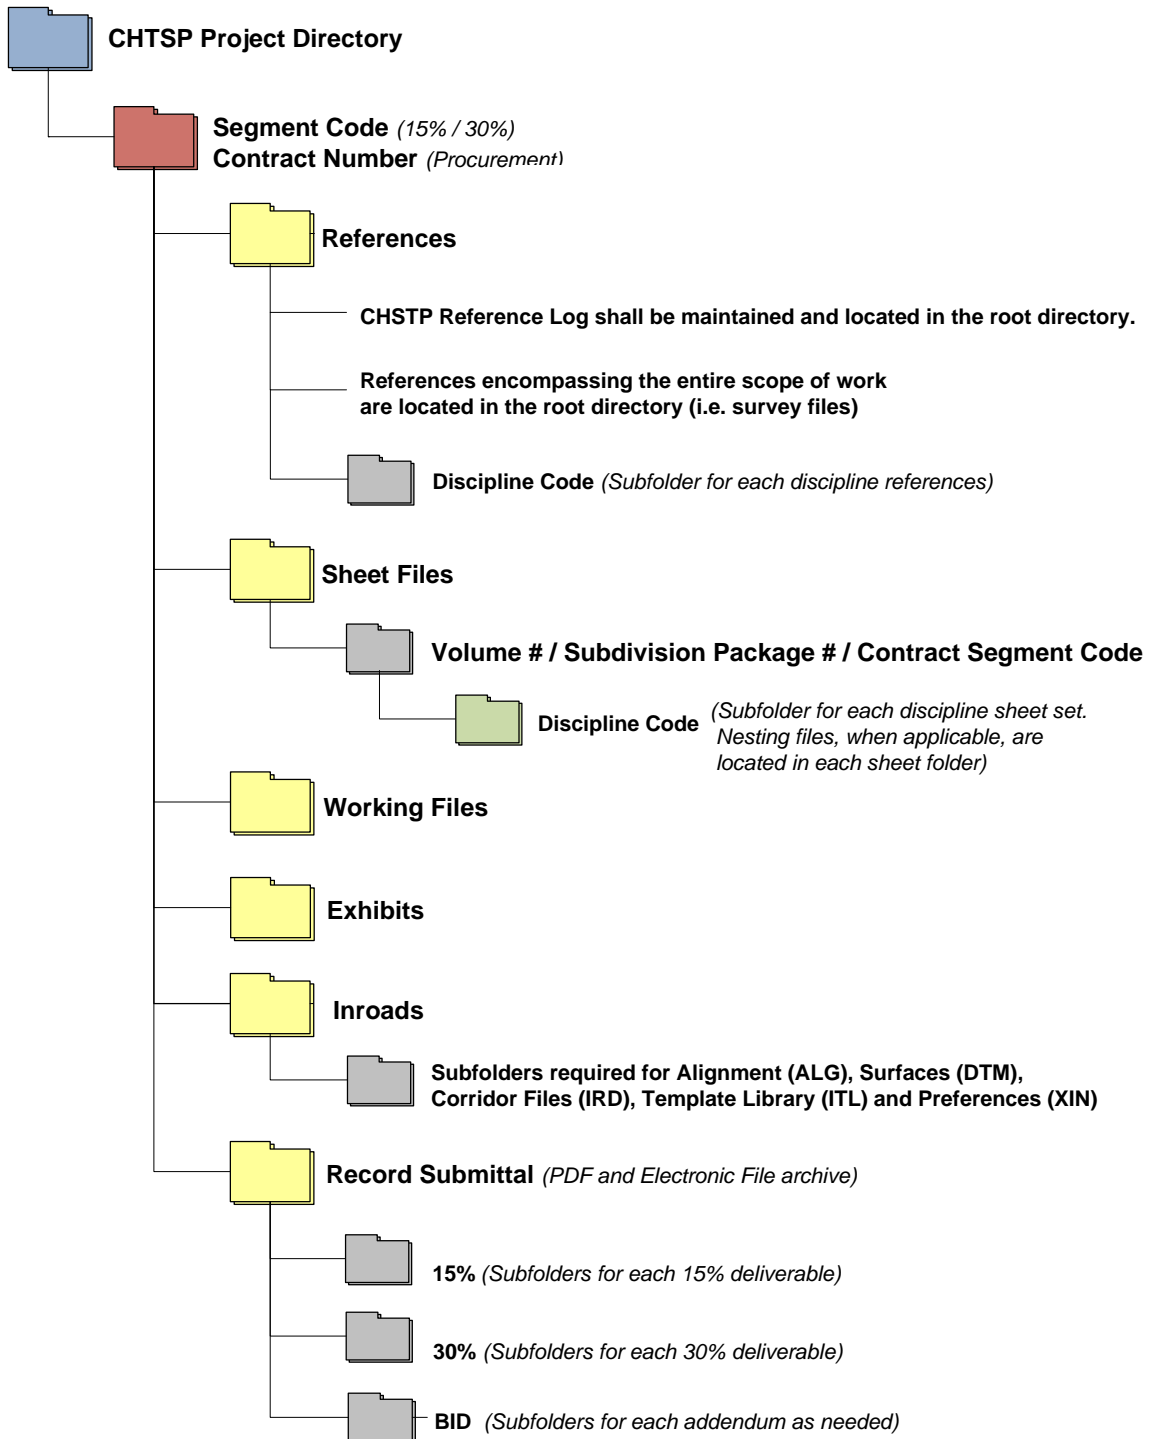

See Section 3.3 for Working File Naming Convention.

2.6 FILE MANAGEMENT AND DIRECTORY STRUCTURE

CHSTP has established a file directory system used to maintain and organize all project related electronic CADD files. Standardized project directory structure promotes efficient and effective storage and retrieval of active and archived CADD files.

The CADD folder structure and general contents shall be as follows:

2.7 PROJECT COORDINATE SYSTEM

The California Coordinate System (CCS), North American Datum of 1983 (NAD83), shall be used for the horizontal coordinate system for the project. All CADD files shall adhere to the designated coordinate system to ensure that all design information can be readily transferred and integrated among various disciplines using reference files.

Source: Caltrans Surveys Manual - Chapter 4, Survey Datums:

http://www.dot.ca.gov/hq/row/landsurveys/SurveysManual/04_Surveys.pdf

2.8 PROJECT VERTICAL DATUM

The vertical datum for the CHSTP design shall be the North American Vertical Datum of 1988 (NAVD88), as defined by the National Geodetic Survey (NGS). For exceptions to this policy, see Caltrans Surveys Manual - Chapter 4, Survey Datums.

Source: Caltrans Surveys Manual - Chapter 4, Survey Datums:

http://www.dot.ca.gov/hq/row/landsurveys/SurveysManual/04_Surveys.pdf

2.9 PROJECT WORKING UNITS

CHSTP has established a Units.def file to ensure all project files have the same units defined. The master units, sub units, resolution and working area, as defined by the units.def and CHSTP seed files, for all CADD Drawings shall be the following:

Master Units (MU)----- Survey Feet (FT)

Sub Units (SU)----- Tenths (TN)

Resolution: ----- 10,000 per Foot

Working Area (each axis): ----- 170,591,236 Miles

The use of the CHSTP units.def is required and must be located in the file path defined in the MS_CUSTOMUNITSDEF variable.

Link to the units.def:

https://www.projectsolve2.com/eRoom/SFOF7/Engineering/0_8053e

2.10 PROJECT SEED FILES

A seed file is a CADD template file that standardizes all new drawings that are created. Every file started with the correct seed file will have the same global origin, working units, attached dgnlib, color table, text style and dim styles. Seed files shall not contain any design elements. When creating a new design file, the appropriate seed file shall be selected and copied to the desired folder and renamed based on the file naming conventions established in Section 3.0. Project seed files provide a method and means for standardizing all DGN files created for this project.

The CHSTP has six seed files each representing the CCS NAD83 zones designated by Caltrans as standards for a 2-D or 3-D environment and one seed file for architectural and structural design. The six zone seed files cover the proposed CHSTP alignment and shall be used for all sheets that need to remain geo-referenced. For design files that fall within two zones, designers shall use the seed file which encompasses the majority of design. Caltrans state zone designations are included in Appendix H.

All CHSTP CADD files must be created from the correct seed file. All files shall be 2D except for those in support of design vertical applications. The list of CHSTP seed files are as follows:

CHTSP Project Seed Files		
2D (geo-referenced)	3D (geo-referenced)	2d (Non geo-referenced)
2deseedZone1.dgn – Zone 1	3deseedZone1.dgn – Zone 1	Arch_Struc_seed.dgn
2deseedZone2.dgn – Zone 2	3deseedZone2.dgn – Zone 2	v8seed.dgn
2deseedZone3.dgn – Zone 3	3deseedZone3.dgn – Zone 3	v8seedz.dgn
2deseedZone4.dgn – Zone 4	3deseedZone4.dgn – Zone 4	
2deseedZone5.dgn – Zone 5	3deseedZone5.dgn – Zone 5	
2deseedZone6.dgn – Zone 6	3deseedZone6.dgn – Zone 6	

All CHSTP CADD files shall be created from the correct seed file.

Each seed file has been supplemented to include its associated geographic coordinate system setting based upon the CCS NAD83 zones. The coordinate system setting can be accessed via the workflow shown below:

Link to the CHSTP seed files:

https://WW3.projectsolve2.com/eRoom/SFOF7/Engineering/0_8053e

2.11 PROJECT RESOURCE FILES

The following resources files are provided for the CHSTP project:

CHTSP RESOURCE FILES	
CHSTP.cel	Cell library established for the project
CHSTP.tbl	Color table established for the project
CHSTPvars.txt	Project variables to supplement MicroStation workspaces setups
Ctfont1.rsc*	Font resource file established for the project
Ctlstyle.rsc*	Supplemental Line styles
CTCELLIB.cel*	Supplemental Civil Cell library
RWEnglish_v8.cel*	Supplemental Right of Way Cell Library
Stcel.cel*	Supplemental Structural Cell library

*Source: Caltrans Office of CADD and Engineering GIS Support

http://www.dot.ca.gov/hq/oppd/cadd/rsc_files/webpage.php:

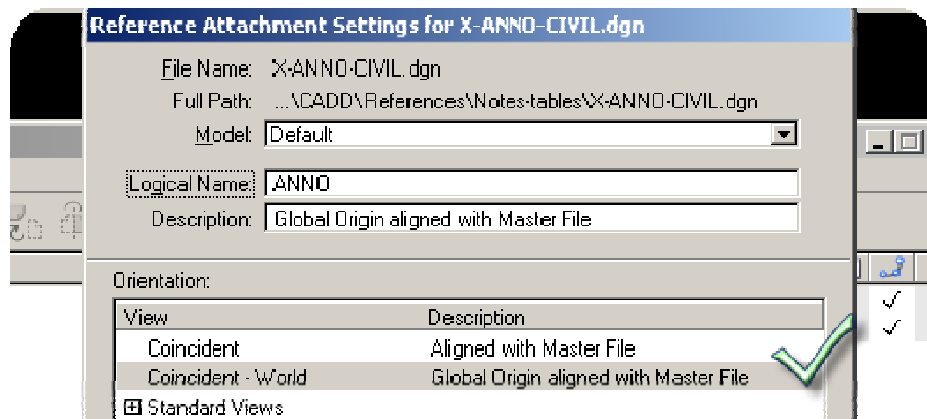

3.0 CADD FILE NAMING CONVENTION

Design efforts shall result in the creation of numerous CADD files, including reference files, sheet files and working files. For the CHSTP, these standards will evolve to accommodate software, hardware and project advancement at logical conversion. The different file types, general usage and file naming convention are discussed below.

3.1 MASTER FILES

Master files contain discipline-specific design information in one continuous file and are referenced into sheet files (See Section 3.4 for description of sheet files). Additional or modified design information within a master file will automatically update in the sheet files.

Master files are tied to the project coordinate system and shall not be moved, rotated, or scaled in order to preserve the coordinate system within the file and allow other Master files to be attached coincident to each other. All master files are attached using **Coincident-World** method.

Master files shall not be nested. Nesting files are only permissible for sheet production.

See Section 3.5.1 for nesting file information

3.1.1 Master File Naming Convention

Master files shall be named using a maximum of 20 characters (excluding hyphens and the three-digit DGN file extension) based on the following template:

Example:

X-JM-TT-ALGN-PROP

San Jose to Merced, Proposed Track Alignment master file

3.1.2 Master File Code (One character)

The first letter of all references shall describe its intended use. The two main master file codes are shown below:

"X"	Master Files prepared for and referenced into design deliverables drawings
"W"	Master Files prepared for preliminary purposes only and not inclusive of any design deliverable drawings.

See Section 3.3 for further information regarding working file descriptions and naming conventions.

3.1.3 Geographic Location Segment Code (Two characters) / Subdivision Package Code (Two characters)

The SECOND and THI characters shall vary depending upon submittal type. During 15% and the SECOND and THI characters indicate the Geographic Location Segment Code, shorthand for one of the ten regional segment identifiers. For Preliminary Design for Procurement design, the SECOND and THI characters indicate the Subdivision Package Code, shorthand for procurement package types prepared for each of the CHSTP subdivisions. For construction drawings, the SECOND and THI characters indicate the Contract Segment Code, shorthand for the CHSTP subdivision design-build construction contract number plus the segment code for drawing packages prepared for each package.

The Segment Codes, utilized during 15% design, are as follows:

GEOGRAPHIC SEGMENT CODE	
Segment Identifier	Segment Code
San Francisco to San Jose	FJ
San Jose to Merced	JM
Altamont Pass	AJ
Sacramento to Merced	SM
Merced to Fresno	MF
Fresno to Bakersfield	FB
Bakersfield to Palmdale	BP
Palmdale to Los Angeles	PL
Los Angeles to Anaheim	LO
Los Angeles to San Diego	LD

The Subdivision Package Codes, utilized during Preliminary Design for Procurement, are as follows:

SUBDIVISION PACKAGE CODE*		
Package #	Subdivision	Description
1	S	Sierra Subdivision Construction Package 1 Procurement Documents

The Contract Segment Code, utilized during construction, is as follows:

CONTRACT SEGMENT CODE		
Contract Number**	Segment**	Description
####	UUU	Sierra Subdivision Construction Package 1 Construction Documents

*Subdivision Package Codes shall be established as procurement packages are prepared.

**Contract Number shall be established by the Authority. Segment Code shall be established by the contractor during the preparation of the construction drawings and submitted to the Authority for approval.

3.1.4 Discipline Code (Two characters)

The FOURTH and FIFTH characters indicate the Discipline Code.

See Appendix C for a complete list of Discipline Codes.

3.1.5 Major Description Codes (Four characters)

The SIXTH and THIRTEENTH characters indicate the Major Description Code. This four-character field code attempts to logically group together similar descriptions that cover multiple disciplines. Major codes can be combined to further differentiate and describe the master file. As shown in the example above, the major description code ALGN (alignment) is united with PROP (proposed) to create the reference file for proposed alignment line work.

The use of both major description codes is not required. A file name can contain one or two major discipline codes. The CHSTP has established a list of common major description codes that will be updated throughout the lifecycle of the project. For the list of Major Description Codes, see Appendix D.

For consistency throughout the master files, the use of the description code EXST (Existing) and PROP (proposed) shall always succeed another major description code. This will ensure that similar master files are group together. See example below:

Example:

X-JM-VS-EASE-EXST.dgn

X-JM-VS-EASE-PROP.dgn

San Jose to Merced, Existing and Proposed Survey Easement Files

3.1.6 User Defined Description Codes (Four characters)

The FOURTEENTH and TWENTIETH characters indicate the user defined description code. The Major description codes are not intended to be all inclusive. There are instances when project specific descriptions will need to be created. In the case of user-defined description codes, they shall contain no more than 6 characters (alpha, numeric or a combination of both). The additional characters shall always be appended to the end of the file name.

As shown in the example below, a common user-defined description code is the plotting scale.

Example:

X-JM-TT-ALGN-200.dgn

San Jose to Merced, Proposed Track Alignment Master file, 200 scale

3.2 LOGICAL NAMES

Logical Names helps identify a reference attachment. It will also provide consistency throughout the entire project plan sets and make it easier to execute routines and scripts for process automation. The CHSTP project will have the following logical names for the major reference files found in most sheet types: (note when two instances of a reference is found in a sheet, a numerical suffix is added to the logical name, i.e. TOPO, TOPO1 and TOPO2).

CHTSP LOGICAL NAMES	
Reference	Logical Name
Boiler Reference	BDR
Track Horizontal Alignment Reference	TALGN
Track Alignment Vertical Profile Reference	TPROF
Road Horizontal Alignment Reference	RALGN
Road Alignment Vertical Profile Reference	RPROF
Topographic Reference	TOPO
Existing Utility Base map	XUTIL
Proposed Utility Base map	PUTIL
Structural Reference	STR
Annotation Reference	ANNO
Nesting Sheet Reference	NEST
Traction Power Reference	PWER
Grading Reference	GRAD
OCS Reference	OCS
Automatic Train Control Reference	ATC
Communication conduit Reference	COMM

3.3 WORKING FILES

Working files are used by designers to prepare various options and/or concepts of a design to avoid confusion and interference with reference files currently in use for actual deliverables. Using working files maintains a record of alternative conceptual design options that may have validity for the future but are not deemed "deliverables". Working files contain project design information prepared only in support of the creation of design discipline drawings or calculations. Working drawings to be plotted for any purpose, including temporary use, inclusion in calculation sets, etc. will be clearly labeled "Working Drawing – DRAFT -" within the electronic file such that a clear distinction can be made from reference or sheet file plots.

Working files are not for inclusion in a specific deliverable plan set, nor are they to be referenced from any plan sheet file. However, CHSTP CADD standards do apply to CADD working files.

For consistency and differentiation from master files referenced into plan sheets, the nested filename shall begin with "W-".

Example:

W-MF-TT-ALGN-PROP-UPRR

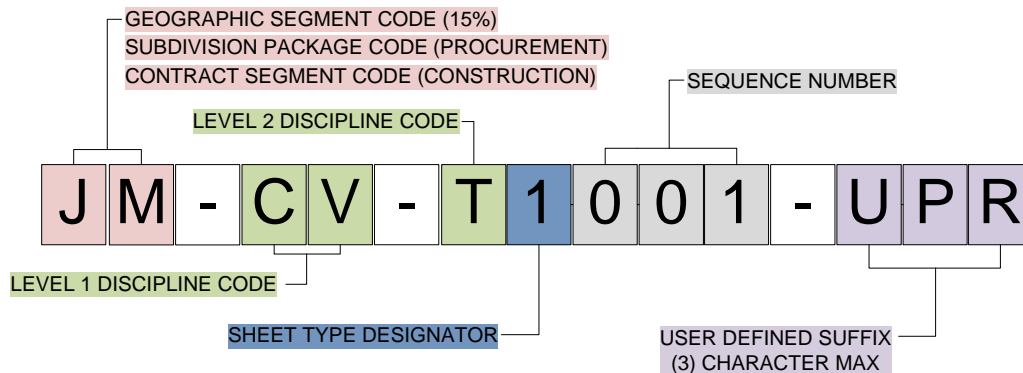

Merced to Fresno, Working file for Proposed Track Alignment, UPRR alternative

3.4 SHEET FILES

Sheet files shall contain north arrow, bar scale, notes, dimensions, etc and shall have attached appropriate reference files such as a standard project border file. Plotting for all drawings shall be done from the sheet files.

3.4.1 Sheet File Naming Convention

Sheet files shall be named using 12 characters (hyphens do not count as a character) plus the three character extension "DGN" based on the following template:

Information regarding the first two characters in the sheet file naming convention can be found in Section 3.1.3 of this manual

Example:

JM-CV-T1001-UPR.dgn

San Jose to Merced, Package 1, Civil Grade Separation, Plan and Profile Sheet Drawing Sequence Plan No. 001 for Alignment Alternative UPRR

3.4.2 Level 1 & 2 Discipline Code

The THI, FOURTH and FIFTH character represent the Level 1 and Level 2 discipline codes. They are used to distinguish sheet sets within each of the various discipline procured for this project. For a complete list of Level 1 and Level 2 discipline codes Appendix C of the CADD Manual

3.4.3 Sheet Type Designators

The SIXTH character indicates the Sheet Type Designator as established by the CHSTP Team. The sheet type is identified by a single numerical character. Sheet types apply across multiple disciplines. For a complete list of Sheet Type Designators, See Appendix E of the CADD Manual

3.4.4 Sequence Number

The SEVENTH through NINTH characters indicate the Sequence Number as established by the CHSTP Team. The sequence number will be assigned in series format, with each block of 100 drawings reserved for each discipline subset. First plan set of each set will start at 001. Subsequent sheets will follow as 002 thru 999.

3.4.5 User Defined Designator

The TENTH through TWELFTH characters indicate a user defined designator as established by the CHSTP Team. The user defined is reserved as a necessary suffix to distinguish sheet files that can possibly have the same sheet number (i.e. in the case of an alignment alternative). The user defined code shall be a minimum of 1 character with a maximum of 3 characters.

3.4.6 Drawing Number

The drawings number to be shown in the title block shall be the sheet filename without the Contract Number or Geographic Segment Code and Package prefix.

Example:

CADD Filename: JM-CV-T1001-UPR.dgn

Drawing Number: CV-T1001-UPR

3.5 PLAN SHEET FILES

Information on plan sheet files usually requires the use of design reference files. Necessary design reference files shall be referenced to sheet files and clipped at the match lines to produce a design discipline drawing. The reference files, with the exception of the standard project border, *shall not be scaled, rotated or moved*, since this shifts the data away from the project coordinate system. The standard project border reference file shall be referenced, scaled, rotated and moved to cover the design information required on the design reference files. Also, the view shall be rotated so the border is horizontal.

Generally, civil and track plans as well as plans illustrating tunnel alignment will be produced in engineering scales (1"=10', 1"=20', et al). Station and Structural plans shall be shown in engineering and architectural scales (1/8"=1', 1/16", et al).

3.5.1 Nesting Files

Nesting files are reference files that are attached to the cut sheets using the "live nesting" feature. A nesting file is a compilation of reference files that are displayed with the settings and level structure that are to be displayed in the cut sheet. When the nesting file is attached to the cut sheet with "live nesting" turned on, the sheet will display all of the levels and settings for all reference files attached to the nesting file.

To ensure consistency between a series of cut sheets, all reference file and level manipulation in a series of sheets should be done directly to the nesting files and not from within the sheet itself.

For example, if you had 20 cut sheets all showing spot elevations from the topography base map, you would go into the nesting file that referenced the topography base map, and was attached to all 20 sheets with "live nesting" turned on, and turn the level that contained spot elevations off directly in the nesting file. This in turn would cause that level to turn off in all 20 sheets. Also, if you wanted to add a particular reference file to all 20 sheets you would simply attach that file to the nesting file that was already attached (and clipped) to all of the cut sheets, and in turn that file would be attached and displayed in all 20 sheets.

In order to ensure that nesting files are not inadvertently manipulated to alter the appearance of a particular drawing, each series of cut sheets will have its own particular nesting files that are referenced to no other sheets or drawings, and in turn each nesting file will be referenced to only one series of drawings.

For consistency, the nested filename shall begin with "NEST-".

Example:

NEST-JM-TT-D1000.dgn

San Jose to Merced, Track Plan and Profile Sheet Nesting File

3.5.2 Borders

The CHSTP has two main borders for the use in design drawings and exhibits and figures respectively. Preliminary and design-build drawing shall use the X-BDR-CHSTP.dgn

Exhibits and sketches shall use EXH-BDR-CHSTP.dgn. See Appendix B for information regarding the borders.

3.5.3 Plan Sheet Drawing Scales

Drawings will be prepared at the following (full size drawing) scales:

- 15% Design Level (Civil)
 - Horizontal 1"=200'; Vertical 1"=20' For undeveloped areas
 - Horizontal 1"=200'; Vertical 1"=20' For developed areas
 - Horizontal 1"=100'; Vertical 1"=10' In constrained urban areas
 - Horizontal 1"=50'; Vertical 1"=5' at stations and special study areas and as appropriate to achieve design level
- Preliminary Design for Procurement Design Level (Civil)
 - Horizontal 1"=100'; Vertical 1"=10' for undeveloped, developed and constrained urban areas
 - Horizontal 1"=50'; Vertical 1"=5' at stations and special study areas and as appropriate to achieve design level
 - Structural & Architectural Scales per Caltrans Structural Seed file
- 15%/Preliminary Design for Procurement Design Level (Structures)
 - General Plan 1"=20' (for structures 150' or less)
 - Elevation 1"=20'
 - For structures 150' or greater, an appropriate engineering drawing scale is required. Plan and Elevation scales shall be identical.
- 15%/Preliminary Design for Procurement Design Level (Architecture)
 - Site Plan 1"=100'
 - Platform Plan 1"=50'
 - Enlarged Partial Platform Plan 1/16"=1' or 1"=20'
 - Concourse/Mezzanine Plan 1"=50'
 - Enlarged Partial Concourse Plan 1/16"=1'
 - Bldg Elevations 1/16"=1' or 1"=20'
 - Bldg Cross/Long Sections 1/16"=1' or 1"=20'

3.5.4 Elevation, Section and Detail Sheet Files

Information on elevation, section and detail sheet files does not require the use of design reference files, except for the standard project border and when necessary, the file itself. Sheet files also consist of schematics, line diagrams, charts and tables.

The Border file is always attached at scale 1"=1' (1:1) with the exception of General Elevation sheets. Other exceptions will be at CADD manager's discretion.

3.5.5 Mixing Drawing Scales

There are two drawing types where a mix of scale occurs: detail drawings (where it is known in advance that there will be details drawn at different scales), and plan drawings with details at a different scale than the rest of the sheet file. The instructions for both types of drawings are below.

Example Using Border Scale:

Detail Drawings: An Appropriate scale is chosen based upon the scale of the details. If the scales of details all vary, the border shall be attached 1"=1' (1:1). The use of a master detail file is permitted for the use of true scaling and measurement.

Plan Drawings: The border remains at its proper scale: 1"=30' (30:1), 1"=100' (100:1), etc. Details are scaled appropriately as needed.

4.0 LEVELS AND SYMBOLOGY

4.1 GENERAL

Design information within a CADD file is organized into levels. For each discipline, each design element shall be drawn on its appropriate level and symbology. It is important that the level structure is followed. Symbology (color, line style, line weight) for all levels should be set to "By Level". This will ensure that the correct symbology is automatically selected when a level is chosen. Proper use of levels affords all CADD users the flexibility to turn on or off design data necessary for different drawings.

4.2 DESIGN FILE LIBRARIES (DGNLIB)

Design File Libraries (DGNLIBs) are files that set the level names, level symbology, text and dimension styles and are referenced to the project workspace at the start of a MicroStation session. The CADD user should never have to attach the project dgnlib file nor have to manually change any settings for placing text or dimensions. If a special situation calls for additional levels or to modify text or dimension styles, the requests shall be made via the CHSTP CADD Standards request sheet. See Appendix F for additional information regarding the DGNLIB.

Link to CHSTP CADD Standards request sheet:

https://WW3.projectsolve2.com/eRoom/SFOF7/Engineering/0_c3557

4.3 FONTS AND TEXT

It is important to place text at the appropriate size within the drawing based upon the intended scale of the plotted plan sheet for clarity and readability of text. For consistency, the fonts and text sizes are defined within dgnlib file by scale. The below chart defines the text and fonts sizes to be used in all packages and discipline.

Engineering			
Scale	Text Height and Width		
	Text (Font 3)	Subtitle (Font 3)	Title (Font Arial Black)
1"=1'	0.14	0.175	0.24
1"=5'	0.70	0.875	1.2
1"=10'	1.40	1.75	2.4
1"=20'	2.80	3.5	4.8
1"=30'	4.20	5.25	7.2
1"=40'	5.60	7	9.6
1"=50'	7.00	8.75	12
1"=60'	8.40	10.5	14.4
1"=80'	11.20	14	19.2
1"=100'	14.00	17.5	24
1"=200'	28.00	35	48
1"=500'	70.00	87.5	120

ARCHITECTURAL			
Scale	Text Height and Width		
	Text (Font 3)	Subtitle (Font 3)	Title (Font Arial Black)
3"=1'	0.046	0.058	0.066
1 1/2"=1'	0.094	0.117	0.134
1"=1'	0.140	0.175	0.200
3/4"=1'	0.186	0.233	0.266
1/2"=1'	0.280	0.350	0.400
3/8"=1'	0.373	0.467	0.533
1/4"=1'	0.560	0.700	0.800
3/16"=1'	0.746	0.933	1.066
1/8"=1'	1.120	1.400	1.600
3/32"=1'	1.494	1.867	2.134
1/16"=1'	2.240	2.800	3.200

4.3.1 Text Placement Guidelines

The following guidelines should be followed when placing text:

- All lettering shall be upper case.
- Custom fonts should not be used.
- Underlining shall not be placed as a separate element. Blank spaces on either side of the text may not be inserted to make the underlining longer than the text.
- Stacked fractions ($\frac{1}{2}$) are required.

4.4 DIMENSIONING

Automatic Dimensioning shall be used for all drawings. Similar to text settings, dimension Settings are set within the **CHSTP.dgnlib** design file library.

Dimension text shall be placed on the appropriate text level with "By Level" symbology.

The dimension alignment modes shall be either view or true. View will allow Automatic Dimensioning to be placed aligned with the drawing view. True will allow automatic dimensioning to be placed true to the element, usually when the element is on an angle from the view. Dimensions shall be placed as necessary and the text shall always be aligned with the dimension line as shown below.

4.5 LINE STYLES

The project line style resource file is **CHTSP.rsc**. The CHSTP line style resource file has been generated from the Caltrans line style resource file (ctlstyle.rsc). MicroStation's default line styles 0 thru 7 are also accessible. The line styles are assigned to levels using By Level in Level Manager. See Appendix G for a complete list of line styles.

5.0 PLOTTING AND PEN TABLES

5.1 PLOTTING

All hard copies will contain plot stamps. This plot stamps can be found on the left margin of the border file. This stamp identifies the name and path of the DGN file, the time and date plotted, the name of the operator who plotted the copy, and the design script used for the plot.

5.2 PLOT DRIVERS

Plot drivers shall be used for all design drawing printing. The plot drivers have been established based upon plot size and plot color output. Plot drivers shall not be modified. Any request for changes must be done via the CHSTP CAD Standard Request Form found in Appendix A. The plot drivers to be used on the project are:

PLOTTING FILES	
CHSR_full_black.plt	Black/White Full Size (22x34) System Printer Plot Driver
CHSR_full_color.plt	Color Full Size (22x34) System Printer Plot Driver
CHSR_half_black.plt	Black/White Half Size (11x17) System Printer Plot Driver
CHSR_half_color.plt	Color Half Size (11x17) System Printer Plot Driver
CHSR_PDF_full_black.plt	Black/White Full Size (22x34) PDF Plot Driver
CHSR_PDF_half_black.plt	Black/White Half Size (11x17) PDF Plot Driver

5.3 PEN TABLE

The Pentable provides the text substitutions for the plot stamps found in the border file. It does not control any printing attributes for drawing entities with the exception of the topographic survey file. The screening colors, screening levels and text substitutions found in the pen table show below:

SCREENING COLORS		SCREENING LEVELS	
CO = 130	: Preliminary Design for Procurement Black	LV = 2-12	: 40% Black
CO = 140	: 40% Black		
CO = 150	: 50% Black		
CO = 160	: 60% Black		
FILL = 250	: 100% Screen (masking fill)

WATR	Water supply
WDWK	Architectural woodwork
WELL	Well
WETL	Wetlands
WIRE	Wiring
WKSF	Work surface
WOOD	Wood
WWAY	Waterway
XFMR	Transformers
ZONE	Zoning

APPENDIX E – SHEET TYPE DESIGNATORS

Sheet Type Designators	
0	General Drawings (Title Sheet, Drawing Index, Data Tables, Notes, Typical Sections and Abbreviations/Symbols)
1	Plan and Profile, and Profile view only
2	Elevation
3	Sections (Section View, Wall Sections and Cross Sections)
4	Enlarged Plan View
5	Details
6	Schedules, Schematics, Charts, Tables and Diagrams
7	User Defined 1 (for sheet types that do not fall in the categories as defined above)
8	User Defined 2 (for sheet types that do not fall in the categories as defined above)
9	3D Renderings

APPENDIX F – DGNLIB

CHSTP DGNLIB Levels	
Level Prefix	Description
1-9,11-12	Caltrans Existing Survey Levels. For use in the topographic survey file only
Level Number	Caltrans Existing Level 0-999. Items of work within this category include roadway, utility, structural and right of way
TT	Track alignment items including station line, annotation, track grid and existing railroad facilities
TP	Traction Power items including traction power site facilities, equipment, symbols and annotation.
OC	Overhead Contact System items including OCS poles, equipment and annotation
AC	Automatic Train Control items including signal houses, interlocking site, train control equipment and annotation.
CO	Communications items including conduits, communication site facilities and annotation
MY	Maintenance Facility items including maintenance yard track, maintenance site facilities and annotation

RFP No. HSR 14-32 – INITIAL RELEASE - 05/27/2015

CHSTP DGNLIB Level		
Number	Name	Description
1	Control	(Includes Survey Monuments)
2	Exist Man Made	Exist Man-Made Features
3	Exist wy	Exist Roadway Features
4	Exist Veg_Nat	Exist Veg & Natural Features
5	Exist Utils	Exist Utility Features
6	Exist Hydro	Exist Hydrographic Features
7	Contours	Relief Features / Contours
8	Spot Elev	Spot Elev / Contour Annotation
9	Profile Grid	Profile Grid
10	Sheet Format	(Includes North Arrow)
11	Undefined	Undefined level
12	Coo Grid	Coo inate Grid
13	Ramp Align	Ramp Over & Undercrossing Align
14	Ramp Anno	Ramp Over & Undercrossing Anno

RD-CMP	CURRUGATED METAL PIPE	
RD-CURB	CURB	
RD-CURBG	CURB AND GUTTER	
RD-DBLBAR	DOUBLE BEAM BARRIER	
RD-FENCE	FENCE	
RD-FLOWLN	DRAINAGE FLOW LINE	
RD-GRIND	GRIND PCC	
RD-MBGR-P	GUARD RAIL	
RD-MBGR-X	GUARD RAIL (EXISTING)	
RD-OG	ORIGINAL GROUND	
RD-PIPEL-P	DRAIN LINE (1-2M)	
RD-PIPEL-X	DRAIN LINE (1-2M) (EXISTING)	
RD-PLANING	PLANING	
RD-PLANRESF	RESURFACE/OBLITERATE	
RD-RESURF	RESURFACE	
RD-WALLBAR	WALL TOP OF BARRIER	
RD-WALL-P	WALL (NEW)	
RD-WALL-X	WALL (EXISTING)	
RD-LNSTRPDSH	LANE STRIPE-DASH	
RD-KRAIL	TEMPORARY K-RAIL	
RD-WATEREDGE	RIVER AND LAKE BOUNDARIES	
RD-STREAM	RIVERS AND CREEKS	
RD-WALLS	WALL ON WALL	
RD-LNSTRPDBL1	LANE STRIPING (SOLID/DASH)	
RD-LNSTRPDBL2	LANE STRIPING (DASH/SOLID)	
RD-LNSTRPDBL3	LANE STRIPING (DBL SOLID)
